

OvinFormulation v1.0

Monetization & Revenue Strategy

A five-year roadmap to build the dominant trilingual sheep nutrition platform across the Maghreb, France, and the Middle East.

This document defines the commercial architecture for OvinFormulation v1.0 across three user tiers — Students, Farmers, and Feed Mills — and details the subscription, marketplace, and partnership revenue streams that will drive the platform from initial launch to €5 million in annual recurring revenue by Year 5. It covers product strategy, pricing, go-to-market, financial projections, risk management, and the seed funding required to capture the underserved 12-million-farmer sheep industry in target markets.

1. Executive Summary

OvinFormulation v1.0 is a trilingual (French, English, Arabic) sheep-feed formulation platform that combines the rigour of INRA 2018 nutritional science with the accessibility of a modern web application. The product already ships with 22 functional modules spanning ration calculation, least-cost linear-programming optimization, an AI assistant, a rumen fermentation simulator, a classroom LMS for agricultural lycées, and a feed-mill production and traceability suite. This document defines the commercial architecture that will convert the current educational prototype into a €5 million ARR SaaS business over the next five years, with revenue derived from three complementary user tiers and eight additional marketplace, partnership, and certification revenue streams.

The strategic opportunity is significant and underserved. The Maghreb (Algeria, Morocco, Tunisia) and France together host more than 27 million breeding ewes and roughly 12 million sheep farmers, yet existing software in the region is either (a) English-only commercial suites priced beyond individual farmers, (b) legacy INRA Excel spreadsheets with no cloud or mobile capability, or (c) generic livestock management tools that do not perform nutritional formulation. OvinFormulation is the first product to combine native Arabic + French + English support, a built-in two-phase Simplex LP solver, an AI ration generator, and a tiered pricing model that simultaneously serves students (free), professional farmers (€9.90/month), and small feed mills (€49/user/month).

Three-tier monetization thesis

The platform monetizes across three user personas that map directly to the existing RBAC architecture. **Students** receive a free tier with 13 modules, supported by in-app advertising and lead-generation fees from agricultural schools and certification programs. **Farmers** pay €9.90 per month (or €89 per year, a 25% discount) for 20 modules including ROI calculation, weather integration, and market price tracking. **Feed mills** pay €49 per user per month for the full 22-module suite, multi-user collaboration, production traceability, lot genealogy, and API access. This three-tier model aligns pricing with willingness-to-pay and creates a natural upgrade funnel: students become farmers, farmers graduate to feed-mill operators.

Five strategic priorities

- **Productize the existing prototype** — Deploy to Vercel + PostgreSQL, add Stripe and PayPal payments, and ship in-app upgrade prompts that gate premium modules behind the subscription wall.

-
- **Capture the Algerian market first** — Use the founder's AgriSkills Academy network and existing relationships with ITGC and Algerian agricultural lycées to lock in 10,000 students and 500 paying farmers within 12 months.
 - **Launch the supplier marketplace** — Convert the existing Concentrate Market and Forage Inventory modules into a two-sided marketplace that takes 5–10% commission on bulk feed purchases, projected to add €750K revenue by Year 5.
 - **Sell B2G to cooperatives and ministries** — Package OvinFormulation as a multi-tenant white-label SaaS for Algerian, Moroccan, and Tunisian sheep cooperatives at €999/site/month, targeting 50 cooperative licenses by Year 3.
 - **Expand vertically and geographically** — After sheep, extend the same engine to goats (Year 3), cattle (Year 4), and camels (Year 5) for the Middle East market, opening a 4× larger addressable user base without rewriting the core LP solver.

Investment thesis in one sentence

OvinFormulation is the only trilingual sheep-nutrition SaaS targeting the underserved 12-million-farmer Maghreb market, with a proven 22-module product, a profitable three-tier monetization model, and a clear path to €5M ARR and EBITDA breakeven by Year 3 — seeking €750K seed at a €4M pre-money valuation.

2. Market Opportunity & Competitive Landscape

The global small-ruminant nutrition software market is fragmented, regionally siloed, and remarkably underserved by modern SaaS products. Three converging factors create a once-in-a-decade opening for OvinFormulation: (1) the structural undersupply of Arabic-language agricultural software, (2) the rapid digitization of North African and Middle Eastern farming communities as mobile broadband reaches rural areas, and (3) the rising cost of compound feed that pushes farmers to optimize rations themselves rather than rely on commercial suppliers.

2.1 TAM, SAM, SOM analysis

The Total Addressable Market (TAM) is defined as every sheep farmer, agricultural student, and feed mill operator who could plausibly use a digital ration-formulation tool in our target geographies. The Serviceable Addressable Market (SAM) narrows this to those with smartphone or PC access and the literacy to use a multilingual interface. The Serviceable Obtainable Market (SOM) is what OvinFormulation can realistically capture in five years given its go-to-market strategy and pricing model.

Region	Sheep farmers	Smartphone users	Feed mills	Annual SAM	Y5 SOM (users)	Y5 SOM (€)
France	84,000	12,000	1,800	€6.2M	3,800	€1.2M
Algeria	1,800,000	180,000	12,000	€4.8M	9,500	€620K
Morocco	1,650,000	165,000	9,500	€3.6M	6,800	€430K
Tunisia	240,000	24,000	1,400	€520K	1,400	€110K
Egypt + Middle East	5,200,000	310,000	8,500	€3.1M	4,200	€510K
West Africa	3,200,000	60,000	900	€280K	800	€90K
TOTAL TAM	12,174,000	751,000	34,100	€17.5M	26,500	€2.98M

TAM figures are derived from FAOSTAT 2024 livestock census data, ITGC Algeria national flock statistics, and Moroccan Ministry of Agriculture pastoral surveys. Smartphone penetration rates (10–15% of farmers) are based on ITU 2024 rural connectivity data. SOM assumes 3.5% capture of SAM by Year 5 — a conservative figure given the lack of competing trilingual products.

2.2 Competitive landscape

Direct competition falls into three categories: (1) high-priced commercial feed-formulation suites like Feedsoft and Bestmix targeted at industrial feed mills, (2) free or low-cost Excel-based tools published by national research institutes (INRA France, ITGC Algeria), and (3) generic livestock management apps that lack nutritional formulation entirely. None of these competitors serve all three user tiers, and none offer native Arabic + French + English trilingual support. OvinFormulation's positioning is therefore uniquely defensible.

Competitor	Languages	Target	Price	LP	AI	Mobile PWA	3-tier
Feedsoft (US)	EN only	Feed mills	\$3,500/year	✓	☒	☒	☒
Bestmix (DE)	EN, DE, FR	Feed mills + large farms	€2,800/year	✓	☒	☒	☒
INRA tables	FR, EN	Researchers, students	Free (Excel)	☒	☒	☒	☒
ITGC Algeria	AR only	Farmers, advisors	Free (PDF)	☒	☒	☒	☒
Ration+ (FR)	FR only	Farmers	€180/year	☒	✓	☒	☒
Tetra Prism (US)	EN only	Cattle feedlots	\$840/year	✓	☒	☒	☒
OvinFormulation	FR · EN · AR	Students + farmers + feed mills	€0–€588/year	✓	✓	✓	✓

OvinFormulation is the only product that serves all three user tiers (students, farmers, feed mills) with the same codebase, the only one that supports Arabic natively, and the only one with a built-in AI ration generator and rumen simulator accessible from a mobile browser. The combination of trilingual support, three-tier pricing, and educational depth (Classroom LMS) creates a competitive moat that is extremely difficult for incumbents to replicate without rebuilding their products from scratch.

The trilingual defensible moat

Incumbents like Feedsoft and Bestmix have 15+ years of English/German code debt. Translating their UIs to Arabic requires not only strings but also right-to-left layout, Arabic numerals, date formats, and Algerian/Moroccan feed databases — a 12-to-18-month engineering effort that none of them has begun. OvinFormulation ships with all of this on Day 1.

3. User Tier Strategy & Pricing Architecture

OvinFormulation's pricing architecture is built on three principles: (1) every user persona must find tangible value in the free tier, so the funnel is wide at the top; (2) upgrade friction must be minimal, with in-app prompts that appear at the exact moment a user tries to use a premium feature; (3) price must reflect the economic value created for each tier, measured by cost savings or revenue increase. The result is a 13/20/22-module split that maps cleanly to the existing RBAC implementation.

3.1 Tier 1 — Student (Free, 13 modules)

The Student tier is intentionally generous: it includes the Dashboard, Ration calculator, Animals database, Forages and Concentrates browsers, CMV selector, Glossary, Calendar, Rumen simulator, Classroom, and the AI Assistant (with a daily message cap of 10). This generosity is deliberate — students who learn sheep nutrition on OvinFormulation become farmers who pay for it. The free tier is monetized through three channels: (a) banner and interstitial ads from agricultural suppliers at €2-4 CPM, (b) lead-generation fees when students upgrade to paying farmers (€5 per conversion), and (c) institutional licensing where agricultural lycées pay €499/year per classroom of 30 students for the LMS module with assignment tracking and grading.

3.2 Tier 2 — Farmer (€9.90/month, 20 modules)

The Farmer tier unlocks the seven highest-value modules for working professionals: Optimization (LP least-cost), Comparer (ration A/B side-by-side), Custom Feeds (own laboratory analyses), Bilan (flock forage balance), Melange (2-concentrate mix), Pâturage (days-ahead grazing), and Prévision (commercial feed label decoder). It also removes the AI message cap, enables unlimited ration saving, and adds weather integration (Météo France + Algeria Météo) and live market price feeds (BNA Algeria + La France Agricole). At €9.90/month or €89/year (25% discount), this is priced below the cost of a single bag of compound feed per month — making it an obvious purchase for any farmer who values data-driven decision-making.

3.3 Tier 3 — Feed Mill (€49/user/month, 22 modules)

The Feed Mill tier is the highest-margin product, designed for small and medium feed manufacturers (1–25 employees) who formulate rations commercially for client farmers. It adds the two most operationally complex modules: Production (batch management with formula snapshots) and Traceability (lot genealogy from ingredient → batch → customer, with one-click recall analysis). The tier also includes multi-user collaboration with role-based access control (formulator, production manager, quality controller), API access for ERP integration, white-label PDF ration reports with the feed mill's logo, and priority email support. Pricing at €49/user/month with a 5-seat minimum (€245/month) compares favorably to Feedsoft at \$3,500/year and Bestmix at €2,800/year, while delivering Arabic-language support they cannot match.

3.4 Pricing comparison table

Tier	Price	Annual	Modules	Key unlocks	Target persona	Monetization lever
Student	€0	€0	13	Ad-supported, 10 AI msg/day, 5 saved rations	Students, agricultural lycée pupils	Acquisition + lead-gen
Farmer — monthly	€9.90/mo	€118.80/yr	20	Unlimited AI, weather, market prices, unlimited saves	Independent sheep farmers (10–500 ewes)	Volume SaaS
Farmer — annual	€7.42/mo	€89/yr	20	Same as monthly + 2 months free + early access to new features	Cost-conscious farmers	Cash-flow optimization
Feed Mill — per seat	€49/user/mo	€528/user/yr	22	Production, traceability, multi-user, API, white-label	Small/medium feed mills (1–25 staff)	High-margin B2B SaaS
Cooperative — site	€999/site/mo	€11,988/yr	22 + multi-tenant	Multi-tenant white-label, on-premise option, SLA	Cooperatives, ministries of agriculture	Strategic B2G

3.5 Conversion funnel and unit economics

The free-to-paid conversion target is 8% within 90 days of registration, in line with industry benchmarks for productivity SaaS (Notion: 11%, Canva: 7%, Evernote: 5%). Customer Acquisition Cost (CAC) targets are €8 for students (mostly organic + content marketing), €25 for farmers (Google Ads + Facebook + agricultural press), and €180 for feed mills (direct sales + trade shows). Lifetime Value (LTV) is calculated at 36-month retention for farmers (€320 LTV) and 60-month retention for feed mills (€2,640 LTV per seat). The resulting LTV:CAC ratios are 12.8:1 for farmers and 14.7:1 for feed mills — well above the 3:1 minimum that venture investors typically require.

Tier	CAC	Avg. retention	LTV	S&M; cost / customer	LTV:CAC	Strategic role
Student	€8	12 mo	€0 (ad)	€5 (lead-gen)	—	Acquisition only
Farmer	€25	36 mo	€320	€60 (ads)	12.8x	Primary revenue driver
Feed Mill (per seat)	€180	60 mo	€2,640	€580 (direct sales)	14.7x	Highest LTV tier
Cooperative	€4,500	84 mo	€84,000	€12,000	18.7x	Strategic accounts

4. Module-by-Module Revenue Map

Each of the 22 existing modules is mapped below to its target user tier, willingness-to-pay signal, and monetization lever. Modules marked 'Acquisition' are deliberately free to drive top-of-funnel growth; 'Hook' modules are free for the first 3 uses then upgrade-gated; 'Premium' modules require a paid subscription; 'B2B-only' modules are exclusively for Feed Mill tier subscribers. This granular map is the single source of truth for in-app upgrade prompts and feature gating.

Module	Tier	Pricing	Role	Revenue	Strategic note
1. Dashboard	All	Free	Acquisition	—	Landing page for every user
2. Animals (requirements)	All	Free	Acquisition	—	Reference data drives signup
3. Forages database	All	Free	Acquisition	—	Largest FR+DZ feed database
4. Concentrates database	All	Free	Acquisition	—	Quality grades A/B/C/D
5. CMV selector	All	Free	Acquisition	—	Gateway to ration module
6. Glossary	All	Free	Acquisition	—	SEO traffic driver
7. Ration calculator	All	Free (3 saves)	Hook	€9.90/mo	Most-used module overall
8. AI Assistant (10 msg/day)	All	Freemium	Hook	€9.90/mo	Unlimited on Farmer tier
9. Agneaux (lamb fattening)	Farmer+	Premium	Premium	€9.90/mo	High-value for finishers
10. Bilan (flock balance)	Farmer+	Premium	Premium	€9.90/mo	Critical for >100 ewes
11. Melange (mix calculator)	Farmer+	Premium	Premium	€9.90/mo	Replaces Excel sheets
12. Pâturage (grazing)	Farmer+	Premium	Premium	€9.90/mo	Seasonal spring/summer
13. Comparer (ration A/B)	Farmer+	Premium	Premium	€9.90/mo	Decision-support tool
14. Custom Feeds (lab data)	Farmer+	Premium	Premium	€9.90/mo	For farmers with analyses
15. Prévision (label decoder)	Farmer+	Premium	Premium	€9.90/mo	Buyer intelligence

Module	Tier	Pricing	Role	Revenue	Strategic note
16. Optimization (LP)	Farmer+	Premium	Premium	€9.90/mo	Direct ROI: 8–15% feed savings
17. Rumen simulator	Farmer+	Premium	Premium	€9.90/mo	Pedagogical + advisory
18. Calendrier (flock)	Farmer+	Premium	Premium	€9.90/mo	Annual planning
19. Classroom LMS	Institution	B2G license	B2B/B2G	€499/class/yr	Lycées + cooperatives
20. Production (batches)	Feed Mill+	B2B-only	B2B-only	€49/user/mo	Core feed-mill feature
21. Traceability (lots)	Feed Mill+	B2B-only	B2B-only	€49/user/mo	Regulatory compliance
22. ROI Calculator	Farmer+	Premium	Premium	€9.90/mo	Justifies the subscription

Optimization module = the conversion engine

The LP Optimization module is the single most powerful upgrade driver. A farmer who runs it once and sees that a reformulated ration costs €0.18/ewe/day instead of €0.23/ewe/day saves €2.50/ewe/month — for a 100-ewe flock, that's €250/month of measurable value against a €9.90 subscription. This 25:1 ROI ratio is the in-app upgrade prompt's core message.

5. Revenue Streams Beyond Subscriptions

Subscriptions alone project €3.6M ARR by Year 5 — but the real commercial upside lies in the eight adjacent revenue streams that leverage OvinFormulation's user base, data, and brand authority. These streams collectively add €1.4M Year-5 revenue and lift blended gross margin from 68% to 78%, because they require minimal incremental engineering investment beyond what is already in the product roadmap. They also create network effects that make the core SaaS harder to displace.

Revenue stream	Description	Y5 revenue	Gross margin	Launch
1. Supplier marketplace commissions	5–10% on bulk feed purchases transacted via the Concentrate Market module	€750K	15%	Y2 Q3
2. CMV & concentrate white-label	Feed mills pay €0.10/bag royalty to brand OvinFormulation-formulated CMV premixes	€280K	82%	Y3 Q1
3. Government & cooperative licensing	Multi-tenant white-label deployments at €5K–50K/site/year, mostly B2G	€540K	85%	Y2 Q4
4. Certified feed-formulation courses	€149/student 8-week course with AgriSkills Academy certification	€380K	76%	Y1 Q4
5. Premium data API (market prices)	€99/month API access for banks, insurers, and researchers to anonymized flock data	€280K	91%	Y3 Q2
6. In-app advertising (students)	Banner + interstitial ads from agricultural suppliers at €2–4 CPM	€85K	92%	Y1 Q1
7. White-label SaaS for cooperatives	€999/site/month for branded multi-tenant deployments	€600K	80%	Y3 Q4
8. Carbon credit certification	€4.99 per ration audit via the environmental impact module (methane + CO ₂ e)	€220K	88%	Y4 Q2

5.1 The supplier marketplace thesis

The Concentrate Market module already catalogs 65+ Algerian and French concentrates with quality ratings, prices, and supplier contact information. The marketplace evolution is straightforward: add a 'Buy' button that lets a farmer request a quote from 3 suppliers in parallel, then complete the transaction through OvinFormulation's escrow payment flow. Suppliers pay a 5% commission on closed deals (10% for premium placement). With 25,000 active farmers by Year 5 and an average bulk purchase of €4,500/year (10 tonnes of barley + 3 tonnes of soya meal), the marketplace processes €112M in GMV — at 5% blended take rate, that's €5.6M of commission revenue, from which OvinFormulation's share after supplier fees and payment processing reaches €750K.

5.2 The carbon credit opportunity

OvinFormulation's environmental impact module already calculates methane emissions (L/day), CO₂ equivalent (kg/head/year), and nitrogen excretion (g/day) for any formulated ration. By Year 4, regulatory carbon markets in the EU and voluntary markets in the Maghreb will allow verified emissions reductions to be tokenized and sold as carbon credits. OvinFormulation is positioned as the certification layer: for €4.99 per ration audit, we issue a third-party-verified certificate quantifying methane reduction relative to a baseline ration, which farmers can then sell on carbon exchanges at €12–25 per tonne CO₂e. With 50,000 ration audits per year by Y5 and a 70% attach rate, this stream alone adds €220K revenue while reinforcing OvinFormulation's environmental brand.

6. Go-to-Market & Acquisition Strategy

The go-to-market strategy is phased by geography and user tier, with each phase designed to validate the commercial model in one market before expanding to the next. Phase 1 (Year 1) focuses on Algeria and France where the founder's AgriSkills Academy network provides direct access to agricultural lycées and farmer cooperatives. Phase 2 (Year 2) expands to Morocco, Tunisia, and Egypt via Ministry of Agriculture partnerships. Phase 3 (Year 3) enters the Middle East (Saudi Arabia, UAE, Jordan) where premium pricing for Arabic-language agricultural software is more sustainable. Phase 4 (Years 4–5) opens West Africa (Senegal, Mali, Burkina Faso) and Latin America (Peru, Bolivia) with alpaca and sheep variants.

6.1 Four-phase geographic rollout

Phase	Timeline	Geography	Target users	Revenue	Key channels
Phase 1	Y1 Q1 – Y1 Q4	Algeria + France	10,000 students, 500 farmers, 8 feed mills	€73K ARR	AgriSkills Academy network, ITGC partnership, lycée pilots
Phase 2	Y2 Q1 – Y2 Q4	+ Morocco, Tunisia, Egypt	35,000 users total, 2,500 paying	€720K ARR	Ministry of Agriculture deals, agricultural press ads
Phase 3	Y3 Q1 – Y3 Q4	+ Saudi Arabia, UAE, Jordan	80,000 users total, 7,500 paying	€1.4M ARR + €180K marketplace	GCC distributor partnerships, Dubai agri-tech conference
Phase 4	Y4 Q1 – Y5 Q4	+ West Africa, Latin America	250,000 users total, 22,000 paying	€3.6M ARR + €750K marketplace + €660K adjacent	FAO partnership, World Bank rural digitization grants

6.2 Channel mix and CAC targets

The acquisition strategy uses a four-channel mix calibrated to each tier. **Content marketing** (YouTube tutorials in French and Arabic, blog posts on sheep nutrition, downloadable ration templates) drives organic student signups at €3–5 CAC. **Paid social** (Facebook and Instagram ads targeting farmer groups in Algeria and Morocco, TikTok #Eleavage clips) converts farmers at €20–28 CAC. **Direct sales** (telephone + WhatsApp + on-site demos at feed mills and cooperatives) closes feed-mill deals at €150–220 CAC. **Institutional partnerships** (ITGC Algeria, INRA France, ONSSA Morocco, FAO regional offices) deliver cooperative licenses at €3,500–6,000 CAC but with €84K LTV per site. The blended CAC across all tiers is €18 in Year 1, declining to €11 by Year 5 as word-of-mouth and brand awareness reduce paid acquisition dependence.

6.3 Launch calendar — Year 1 cohort targets

Quarter	Milestone	Students	Farmers	Feed mills	Run rate
Q1	Algeria + France soft launch	5 lycées pilots (1,500 students)	20 farmers	2 feed mills	€8K ARR
Q2	Public launch + paid social	4,500 students (cum.)	150 farmers (cum.)	5 feed mills (cum.)	€36K ARR
Q3	ITGC partnership announced	7,500 students (cum.)	300 farmers (cum.)	6 feed mills (cum.)	€62K ARR
Q4	Morocco pre-launch + courses	10,000 students (cum.)	500 farmers (cum.)	8 feed mills (cum.)	€73K ARR

Why Algeria first, not France

France has 84,000 sheep farmers but the market is saturated with INRA tools and French-language competitors. Algeria has 1.8 million sheep farmers and zero competing software in Arabic — the founder is Algerian, speaks the dialect natively, and has 5+ years of relationships with ITGC and the agricultural lycée network. Capturing 0.5% of Algerian farmers = 9,000 paying users, more than the entire French farmer TAM at 8% penetration.

7. Five-Year Financial Projection

The financial model is built bottom-up from per-tier user counts, blended ARPU, and marketplace take rates — not top-down market share assumptions. Revenue is recognized monthly (SaaS) or per-transaction (marketplace, courses, certification). Cost structure assumes a remote-first team of 4 engineers, 2 sales/marketing, 1 designer, and 1 operations lead by Year 3, with infrastructure scaling on Vercel + Supabase + Cloudflare at €0.18 per active user per month. The model reaches EBITDA breakeven in Q3 of Year 3 and positive cash flow from Year 4 onward.

7.1 Revenue projection by year

Year	Total users	Free	Farmer	Feed mill	Subs ARR	Marketplace	B2G license	Courses	API	Carbon audit	Total revenue
Y1	10,000	7,000	2,500	500	€73K	€0	€0	€0	€0	€0	€73K
Y2	35,000	29,000	5,000	1,000	€720K	€35K	€0	€0	€40K	€0	€795K
Y3	80,000	65,000	12,500	2,500	€1.42M	€180K	€80K	€60K	€110K	€0	€1.85M
Y4	150,000	118,000	26,000	6,000	€2.30M	€420K	€220K	€180K	€180K	€110K	€3.41M
Y5	250,000	190,000	50,000	10,000	€3.60M	€750K	€540K	€380K	€280K	€220K	€5.77M

Subscriptions include Farmer (€89/yr) and Feed Mill (€528/yr) tiers. B2G license revenue includes cooperative white-label (€11,988/yr per site) and government site licenses. Courses revenue assumes €149 per student with cohort sizes growing from 250 (Y2) to 2,550 (Y5). API revenue assumes 50 (Y3) → 280 (Y5) paying API customers at €99/month.

7.2 Cost structure and P&L;

P&L; line	Y1	Y2	Y3	Y4	Y5
Revenue	€73K	€795K	€1.85M	€3.41M	€5.77M
Cost of revenue (infra + support)	€18K	€95K	€222K	€476K	€808K
Gross profit	€55K	€700K	€1.63M	€2.93M	€4.96M
Gross margin %	75%	88%	88%	86%	86%
R&D; (engineering team)	€220K	€480K	€620K	€780K	€940K
Sales & marketing	€85K	€210K	€420K	€640K	€860K
General & administrative	€48K	€120K	€210K	€320K	€440K
Total operating expenses	€353K	€810K	€1.25M	€1.74M	€2.24M
EBITDA	–€298K	–€110K	€380K	€1.19M	€2.72M
EBITDA margin %	n/a	n/a	21%	35%	47%

7.3 Key financial milestones

- **Y1 Q4:** 10,000 active users, €73K ARR, first 8 feed-mill customers signed
- **Y2 Q2:** First €100K MRR month, supplier marketplace v1 launched
- **Y2 Q4:** 35,000 users, €795K ARR, Morocco entry complete
- **Y3 Q3:** EBITDA breakeven, first cooperative license signed
- **Y4 Q1:** €3M ARR, first carbon credit certificate issued
- **Y5 Q4:** €5.77M revenue, 250,000 users, 47% EBITDA margin

Why EBITDA breakeven in Y3 — not Y4 or Y5

The unit economics work because feed-mill B2B revenue (€528/user/year at 88% gross margin) carries the cost of acquiring the much larger student and farmer base. By Y3, 2,500 feed-mill users generate €1.32M of high-margin revenue that covers R&D; and S&M; for the entire platform. This B2B-funds-B2C model is the same one that made Slack, Notion, and Canva profitable — and it works because the free tier creates the top-of-funnel that the B2B sales team converts.

8. Product Roadmap & Monetization Features

The 12-month roadmap is sequenced to ship monetization infrastructure first, then layer premium features that justify the subscription price, then open new revenue streams (marketplace, courses, API, carbon certification) on top of the now-monetized base. Each quarter includes a 'tier unlock' that moves a module from free to premium, creating natural upgrade prompts. Engineering capacity assumes 3 full-stack engineers + 1 designer + the founder acting as PM, with selective contractor support for Arabic translation QA and mobile PWA optimization.

8.1 Quarter-by-quarter roadmap

Quarter	Engineering deliverables	Tier unlocks	Revenue impact
Q1	Vercel + PostgreSQL production deploy; NextAuth.js (email + Google); Stripe + PayPal subscriptions; in-app upgrade prompts; role persistence	Production deploy, payments, RBAC enforcement	Subscriptions live, €73K ARR target
Q2	Mobile PWA push notifications; offline mode premium; advanced AI ration (GPT-4 powered, 5-ration output); supplier marketplace v1 (quote requests only)	Premium AI + marketplace quotes	Marketplace GMV: €80K
Q3	Weather API integration (Météo France + Algeria Meteo); live market price tracking (BNA Algeria + La France Agricole); OCR feed label decoder (premium); Arabic translation QA pass v2	Weather + prices + OCR	Conversion +3% (weather justifies Farmer tier)
Q4	Carbon credit certification module; cooperative multi-tenant SaaS; public API v1 (REST + GraphQL); Ration Pro print export with white-label branding	Carbon + multi-tenant + API	Carbon audits: 500 @ €4.99; API: 50 customers

8.2 Feature-gating matrix per tier

The feature-gating matrix below specifies which capabilities are available at each tier. Free tier users hit upgrade prompts after 3 saves of any ration, after 10 AI messages per day, and on every attempt to access a Premium or B2B-only module. The prompts are contextual: when a student hits the save limit, the upgrade message references their in-progress ration specifically; when a farmer hits the optimization paywall, the message calculates their potential feed cost savings based on the current ration composition.

Capability	Student	Farmer	Farmer+	Feed Mill
Ration saving	3 rations	Unlimited	Unlimited + version history	Unlimited + team sharing

Capability	Student	Farmer	Farmer+	Feed Mill
AI Assistant	10 msg/day	Unlimited	Unlimited + custom prompts	Unlimited + API access
LP Optimization	Locked	Unlimited	Unlimited + multi-objective	Unlimited + sensitivity analysis
Production batches	Locked	Locked	Locked	Unlimited + formula snapshots
Traceability (lots)	Locked	Locked	Locked	Unlimited + recall analysis
Multi-user collaboration	Locked	Locked	Locked	Up to 25 users
API access	Locked	Locked	Read-only (own data)	Full CRUD + webhooks
White-label reports	Locked	Locked	Logo on PDF	Full white-label + custom domain
Weather + market prices	Locked	Unlimited	Unlimited + alerts	Unlimited + bulk export
Support	Community	Email (48h)	Email (24h)	Priority + WhatsApp

9. Risk Analysis & Mitigation

Every commercial plan must identify its top risks honestly. The risks below are ranked by combined probability $\times$ impact ($P \times I$ score out of 25), with each risk having a named owner, a mitigation strategy, and a contingency budget drawn from the €750K seed raise. Risks scoring 12 or above require board-level monitoring; risks scoring 8–11 are reviewed monthly by the management team; risks below 8 are tracked quarterly.

Risk	Description	P	I	Score	Owner	Mitigation	Budget
1. Free-tier cannibalization	Students never convert to paying farmers; ARPU stays below €3	3	4	12	CEO	Aggressive contextual upgrade prompts; Farmer tier priced at €9.90 (below €12/yr feed savings); annual plan discount	€15K (A/B testing + CRM)
2. Arabic localization quality	Dialectical errors in Algerian vs MSA Arabic alienate users	3	4	12	CTO	Native Algerian translator + MSA fallback; user feedback loop with lycée partners	€18K (translation QA)
3. Rural internet penetration	Algerian/Moroccan farmers lack reliable 4G for cloud app	4	3	12	CTO	PWA offline mode for Farmer tier; data-light UI; SMS reminders for critical alerts	€30K (PWA optimization)
4. Government policy shifts	Algerian import restrictions block Stripe/PayPal payments	3	4	12	CEO	Edahabia (Algeria Post) integration + BaridiMob; multi-processor payment router	€20K (payment integration)
5. INRA data licensing	INRA requests takedown of feed values derived from their tables	2	5	10	CEO	Cite INRA 2018 as scientific source (fair use); supplement with ITGC Algeria primary data	€10K (legal review)
6. AI hallucination liability	AI ration generator recommends toxic feed ratios; animal deaths	2	5	10	CTO	Hard nutritional guardrails (max urea, min NDF); disclaimer + insurance; human review for B2B	€15K (liability insurance)
7. Payment infrastructure	Algerian payment gateways reject SaaS recurring billing	4	3	12	CEO	Multi-processor: Stripe (EU) + Edahabia (DZ) + BaridiMob + crypto (USDT) as fallback	€25K (payment engineering)

Risk	Description	P	I	Score	Owner	Mitigation	Budget
8. Competition from free INRA tools	INRA ships a free cloud version of their tables	2	4	8	CEO	Out-execute on UX, mobile, AI, and trilingual support; lock in lycée contracts pre-emptively	€0 (operational)
9. Data privacy (GDPR + Algerian law)	Regulator fines for improper handling of farmer data	2	4	8	CTO	EU-hosted data (Frankfurt); GDPR-compliant DPA; Algerian data residency option for B2G	€12K (compliance audit)
10. Currency volatility	DZD/TND depreciation against EUR reduces MRR in EUR terms	4	2	8	CEO	Local-currency pricing in DZD/TND; hedge 50% of forecasted MRR with forward contracts	€8K (treasury)

Aggregate contingency budget: €171K, representing 23% of the €750K seed raise. This buffer is held in a separate bank account and can be deployed without board approval for any single risk scoring 10 or above. Any contingency spend is reported in the monthly investor update.

10. Funding Ask & Investment Thesis

OvinFormulation is raising a €750,000 seed round at a €4,000,000 pre-money valuation, implying a €4,750,000 post-money valuation and a 15.8% equity stake for new investors. The round will be structured as a SAFE (Simple Agreement for Future Equity) with a €4M valuation cap and a 20% discount, converting at the Series A. The lead investor target is a Maghreb-focused fund (such as 216 Capital, Algebra Ventures, or Partech Africa) with strategic participation from an agricultural angel (former Cargill / DSM / InVivo executive). The round is sized to fund 24 months of runway through EBITDA breakeven in Q3 Year 3, with no requirement for a bridge round.

10.1 Use of funds

Use of funds	Detail	Amount	%
Engineering hires	4 FTEs (2 senior full-stack, 1 mobile/PWA, 1 data scientist)	€340K	45%
Sales & marketing	2 FTEs (1 B2B AE, 1 growth marketer) + €80K ad spend	€190K	25%
Localization & content	Arabic translation, video courses, blog content	€110K	15%
Infrastructure	Vercel, Supabase, Cloudflare, payment fees, AI API costs	€75K	10%
Legal & administrative	Company incorporation (France + Algeria), GDPR compliance, IP	€35K	5%
TOTAL	24-month runway to EBITDA breakeven	€750K	100%

10.2 Investor thesis

OvinFormulation presents a rare combination of (1) a proven product with 22 working modules already shipping, (2) a clear path to profitability without requiring hyper-growth, (3) a defensible trilingual moat in an underserved 12-million-farmer market, and (4) multiple expansion runways into adjacent livestock verticals (goats, cattle, camels) and geographies (Middle East, West Africa, Latin America). The founder's track record via AgriSkills Academy — including existing relationships with ITGC Algeria, multiple agricultural lycées, and 5,000+ students trained in the past three years — de-risks the go-to-market execution significantly compared to a typical pre-seed SaaS.

10.3 Exit scenarios

Exit path	Likely acquirers / route	Valuation	Multiple	Timing	Probability
Strategic acquisition	Cargill, DSM-Firmenich, Chr. Hansen, Adisseo	€30–50M	5–7x revenue at exit	Y5–Y7	60% probability — most likely path
PE growth buyout	AfricInvest, Cathay AfricInvest, Partech Africa Growth	€40–80M	6–10x revenue	Y5–Y6	20% probability — if EBITDA margin > 30%
IPO on Euronext Growth	Paris secondary listing	€80–120M	12–18x revenue	Y7–Y8	10% probability — requires €10M+ ARR
Founder buy-back / dividend	Self-funding from cash flow	€15–25M	Dividend yield 8–12%	Y5+	10% probability — lifestyle business option

Why invest now, not in 12 months

The window to lock in the Maghreb sheep-nutrition market is open today and will close within 18 months. Incumbents Feedsoft and Bestmix have begun Arabic UI mockups; INRA France is rumored to be digitizing their tables into a cloud product. By investing now, OvinFormulation can sign exclusive 3-year cooperative and ministry deals that effectively block competitors from the market — turning first-mover advantage into permanent category leadership. A 12-month delay reduces the strategic exit valuation by an estimated 40%.
